PRESS RELEASE

June 17, 2013
FOR IMMEDIATE RELEASE

Faspro Technologies, Inc. Launches New Website and Domain Name
Chicago, IL

Today, Faspro Technologies, Inc. has launched its new website at www.fasprotech.com. "We are excited to continue our journey of establishing Faspro as an industry leader in the metal fabrication and assembly services sectors. Under one brand our three operating companies are now unified." Said Scott Smith, VP of Sales & Marketing for Faspro.

Previous to this we were doing business as Electoplated Metal Solutions (EMS), Faspro Products, and BIC Manufacturing. "The simplicity of putting our capabilities under one moniker, Faspro Technologies, Inc. makes good business sense and allows us to serve our customers more efficiently", said Igor Shkarovsy, Faspro's CEO.

It was 2006 when our previous website had been launched. Digital technology and marketing has changed significantly since then. Our new site now supports automatic resizing of the contents based on whatever device you're using. It supports social media and blogging links as well. These features didn't exist or weren't relevant in 2006 but are now. Our new website also makes it easier for potential new customers to find us and pre-qualify us as a source for their thin gauge sheet metal needs. We have incorporated the latest technology and techniques so that we can be found in common industry search queries on Google, Bing or Yahoo for example. Our new website will continue to evolve and be enhanced with information that will assist our customers in designing manufacturable parts and assemblies for their products.

Faspro, originally founded in 1995 serves the needs of manufacturing OEM's across numerous industry sectors for prototype and short run, thin gauge fabrication and small assembly needs. Headquartered in Arlington Heights, IL with its photomilling and electroplating operations located in Elk Grove Village, IL we have been serving the needs of wireless, telecom, medical device, industrial and electronics OEM's since our inception.
